COMMENTS:

After an internal review, it was noticed a bradenhead mitigation plan was implemented and a Form 4 was missing. The N PARACHUTE WF15A-25 A36 596 (API: 05-045-15629) has a tied in bradenhead to bleed down to line pressure. The surface casing had a tie-in mitigation strategy implemented between 2010-2015 and has remained tied in since. Caerus Oil & Gas proposes to make no changes to the bradenhead tied into the sales line. This Form 4 is being submitted to ensure a record exists noting the implemented pressure management plan. Note: static pressures on the production casing string during the bradenhead blow-down test confirm casing integrity is not compromised.
