COMMENTS:

It is requested that the bradenhead test that conducted on 4 22 2024 be excepted as an alternative braden head test. This well produces up tubing without a packer. A regular MIT test would require a workover rig to pull the pipe set a packer test the well and retrip the tubing. This is uneconomical. An MIT will be conducted when and if a rig is required to be put on the well or when bradenhead tests indicate a potential problem. The recent bradenhead test was conducted while the well was shut-in. Casing and tubing pressures were both 723 psig. There was 5 psi on the bradenhead which immediately blew to zero, and no change in the tubing and casing pressure during the 30 minute bradenhead test. This well has mechanical integrity and protects health, safety, welfare, the environment, and wildlife resources.
