2022 1st post-production test had 254 PSI that blew down to 0 psi after the first minute with no flow for the remainder of the test. November 2023 annual test had 13 PSI that blew down to 0 PSI in seconds with no flow or pressure for the entire test. Bradenhead gas determined to be thermogenic gas with somewhat similar composition as the production gas sample. PDC will continue to remediate pressure using fluid displacement.

CONDITIONS OF APPROVAL, IF ANY LIST

COA Type

Description

1. Operator will implement measures to control venting, to protect health and safety, and to ensure that vapors and odors from well operations do not constitute a nuisance or hazard to public welfare.
2. Prior to starting bradenhead mitigation, if a sample has not been collected within the last twelve months collect bradenhead and production gas samples for laboratory analysis. Sampling will comply with Operator Guidance - Bradenhead Testing and Reporting Instructions, Appendix A: Liquid and Gas Sampling. Copies of all final laboratory analytical results will be provided to the ECMC within three months of collecting the samples.
3. Operator will implement measures to get an initial estimate of the gas flow rate and/or volume from the bradenhead. During the shut-in period record pressure data to adequately characterize the build-up. This mitigation plan may be used for six consecutive months from the date test reported on the Form 17.
4. At the conclusion of the six months (11/15/24), conduct a new bradenhead test and submit the Form 17 within ten days of the test and submit a Form 4 Sundry that summarizes current well condition. The sundry should include details of the future plans, sample analysis interpretation, character and volume of any pulled fluids, and the flow rate information and pressure data.

Shut in bradenhead pressure shall not exceed 50 psig.
