## OPERATOR COMMENTS AND SUBMITTAL

Comments	<p>Habitat mitigation fees have been determined through consultation with CPW.</p> <p>KMOG's general Air Monitoring Plan has been approved by the CDPHE and is attached to the 2B. A site-specific Air Monitoring Plan for this location will be submitted to the ECMC and CDPHE for approval of air monitor locations prior to operations.</p> <p>Flowlines: Flowlines will flow to the production facility. During production, flow direction in the flow lines is from the wellhead to the production facility. The size of flow lines is typically 3". Flow lines will be constructed from steel pipe, buried, and will equal the distance between the well heads and the production facility. Gas custody transfer will occur at the custody transfer meter located on the proposed production facility location. Oil custody transfer will occur at the LACT Unit located on the proposed production facility location.</p> <p>Gas lift lines are also occasionally installed (one per well) from the well head to the production facility. During operation flow direction in the supply lines will be from the production facility to the well head. The size of the supply lines is typically 1". Supply lines will be constructed from steel pipe, buried, and will equal the distance between the well heads and the production facility.</p> <p>KMOG is proposing one MLVT up to 25,000 bbl - 36 feet tall and 70 feet diameter. The vendor of the MLVT is Shalestone and will be utilized for completions operations at this Location. These MLVTs are &gt;5280' from the nearest RBU and are not immediately upgradient from waters of the state. Please see additional mitigation measures in the BMP section.</p> <p>A pre-application consultation with CPW, regarding this Oil and Gas Location, occurred and was determined to be in pronghorn winter concentration area HPH.</p> <p>Although not required a community consultation plan has been attached and labeled "other."</p>
