Site Investigation and Remediation Workplan (Initial Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by ECMC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

This form is being submitted to comply with COGCC Rules 911.a.(4), 913.a., 913.b.(1), 913.b.(2), and 913.c.(9). The form serves as the initial notification to abandon multiple pipelines and associated risers that convey production fluids offsite from the O36A-596 (ECMC Location ID 335583) and the O36B-596 (ECMC Location ID 335658).

On 12/20/2023 and 12/26/2023, 15 soil samples were collected from existing excavations (and resulting stockpiles) associated with the abandonment of pipeline risers/infrastructure. All samples were submitted for laboratory analysis of all analytes listed in ECMC Table 915-1. Laboratory analytical results indicate that all samples exhibited EC, SAR, pH, and/or arsenic exceedances of ECMC Table 915-1 Residential Soil Standard Cleanup Levels. Please see the attached documents titled "O36 Pipeline Decommissioning Riser Abandonment Soil Assessment Field Notes - 12-20-2023" and "O36 Pipeline Decommissioning Riser Abandonment Soil Assessment Field Notes - 12-26-2023" which detail the sampling events and sample locations. Also attached to this form is an analytical table summarizing the analytical results as well as the official laboratory analytical reports.

COA Type**Description**

	Laboratory results for hexavalent chromium for all samples have an RDL (1.0 mg/kg) that exceeds Table 915-1 cleanup concentrations (0.3 mg/kg). Per Rule 915.e.(1).C, laboratory methods selected will have detection limits less than or equal to the cleanup concentrations in Table 915-1. Address potential hexavalent chromium exceedances on the next Form 27 project update.
	Comply with COGCC Rule 1105 flowline abandonment requirements, including notification and verification requirements.
	Operator shall collect soil samples from areas most likely to be impacted and shall collect an appropriate number of representative soil samples to delineate the horizontal and vertical extents of contamination, per Rule 915.e.(2).B.
	Operator shall collect sample(s) from comparable, nearby non-impacted native soil for purposes of establishing background soil conditions including pH, electrical conductivity (EC) and sodium adsorption ratio (SAR), per Rule 915.e.(2).D.
	Per Rule 913.b.(2), the Operator will conduct sampling and analysis of soil, and groundwater--if encountered, to determine the horizontal and vertical extent of any contamination in excess of the cleanup concentrations in Table 915-1 for soil and groundwater. The Operator shall analyze samples for the complete Table 915-1 list and shall compare analytical results for site investigation samples to both the Table 915-1 Residential Soil Screening Level Concentrations and the Protection of Groundwater Soil Screening Level Concentrations. Submit an assessment of potential pathways to groundwater via a Supplemental Form 27.
