## Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by ECMC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27.

This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

Soil samples were analyzed by a certified laboratory for TPH (total volatile [C6-C10] and extractable [C10-C36] hydrocarbons), organic compounds in soil per ECMC Table 915-1, EC, SAR, pH, and boron. All samples collected were analyzed by a certified laboratory using approved ECMC laboratory analysis methods.

**OPERATOR COMMENT**

This form is being submitted for HSR-Massey #5-31. In the absence of any elevated hydrocarbons, and with consideration to all soil suitability parameters and metals concentrations in compliance with ECMC Table 915-1, the slightly reduced pH found at FL01-E, 5.74, is not indicative of a release. Noble, however, in the absence of a background sample being collected is recommending a site assessment be scheduled to delineate residual pH at the flowline directional change. Groundwater was not encountered as part of these activities.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
