Was spill/release completely contained within berms or secondary containment? YES Was an Emergency Pit constructed? NO			
Secondary containment, including walls & floor regardless of construction material , must be sufficiently impervious to contain any discharge from primary containment until cleanup occurs.			
A Form 15 Pit Report shall be submitted within 30 calendar days after the construction of an emergency pit

How was extent determined?			
The vertical and horizontal extent of contamination was initially determined via in field screening techniques using a photoionization device (PID) to measure volatile organic compounds as well as visual and olfactory observations. Excavation and soil sampling activities were conducted along with confirmation sampling. Soil samples were submitted to Summit Scientific Inc. in Golden, Colorado and Origins Laboratory in Denver, Colorado and analyzed for ECMC Table 915-1 constituents to ensure the removal of all impacted material.

CORRECTIVE ACTIONS

#1 Supplemental Report Date: 06/24/2024

Root Cause of Spill/Release Corrosion

Other (specify)

Type of Equipment at Point of Spill/Release: Horizontal Heater Treater

If "Other" selected above, specify or describe here:

Describe Incident & Root Cause (include specific equipment and point of failure)

Microbial induced corrosion created two holes in the fire tube which led to the release that occurred on 3/22/2024.

Describe measures taken to prevent the problem(s) from reoccurring:

The corroded fire tube was replaced immediately upon the discovery of the release and all other infrastructure at the facility was inspected for corrosion. Moving forward, a more robust chemical corrosion inhibitor solution has been added to infrastructure at this facility. Samples of the chemical will be collected and analyzed on a regular basis to determine the effectiveness of the chemical. Based on the results of the samples the chemical corrosion inhibitor solution can be adjusted to meet the needs of the specific infrastructure that it is in contact with in order to prevent this issue from reoccurring.

Volume of Soil Excavated (cubic yards): 832

Disposition of Excavated Soil (attach documentation) ☐ Offsite Disposal ☐ Onsite Treatment

☐ Other (specify)

Volume of Impacted Surface Water Removed (bbls): 0

REQUEST FOR CLOSURE

Spill/Release Reports should be closed when impacts have been remediated or when further investigation and corrective actions will take place under an approved Form 27.

Basis for Closure: ☐ Corrective Actions Completed (documentation attached, check all that apply)

☐ Horizontal and Vertical extents of impacts have been delineated.

☐ Documentation of compliance with Table 915-1 is attached.

☐ All E&P Waste has been properly treated or disposed.

☐ Work proceeding under an approved Form 27 (Rule 912.c).

Form 27 Remediation Project No: _____

☐ SUSPECTED Spill/Release did not occur or was below Rule 912.a.(5) reporting thresholds.

OPERATOR COMMENTS:

This Form is being submitted as a timeline update. Form 27 Initial Document #403826338 was submitted on 6/24/2024 in conjunction with this form. Once a remediation project number is assigned, a Supplemental Form 19 Closure Request document will be submitted.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
