OPERATOR COMMENTS AND SUBMITTAL

Comments This location will be drilling for helium. No natural gas will be encountered. The Helium will be piped to offsite production facilities. No natural gas will be flared or vented. The well will not be hydraulically fractured.

Closed loop system will not be used because mud will typically not be used. If mud is required, a Form 4 will be submitted notifying COGCC of the change and a closed loop system will be used.

The air monitoring requirement regulates organic hydrocarbons (VOCs, methane, ethane....) which will not be part of the extraction of helium. Therefore, the BNL helium wells do not trigger the Reg 7 air monitoring.

Sensitive area for water resources is checked due to shallow depth to groundwater.

I hereby certify that the statements made in this form are, to the best of my knowledge, true, correct and complete.
