Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by ECMC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

OPERATOR INFORMATION

☐ Other (as described by EPA)

DESCRIPTION OF IMPACT

Impacted?	Impacted Media	Extent of Impact	How Determined
UNDETERMINED	GROUNDWATER	TBD	Groundwater Samples/Laboratory Analytical Results
UNDETERMINED	SOILS	TBD	Soil Samples/Laboratory Analytical Results

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Wellhead cut and cap operations were completed at the St of Colo AM 4 wellhead on November 28, 2023. Groundwater was not encountered in the wellhead cut and cap excavation. Visual inspection and field screening of soils around the wellhead and associated pumping equipment was conducted following cut and cap operations, and a soil sample [B01@6' (AM 4)] was submitted for analysis of full list Table 915-1 constituents to determine if a release occurred. The flowlines associated with the Davis St 20-16 and St of Colo AM 4 wellheads were removed between November 27 and November 29, 2023, and soil samples were collected from the locations where the flowline risers were disconnected from the wellheads [WH01-RISER@3' (20-16) and WH01-RISER@3' (AM 4)] and from the locations where the flowlines turned at sharp angles (FL01@4', FL02@3', and FL03@4'). The samples were submitted for laboratory analysis of full list Table 915-1 constituents to determine if a release occurred. Initial analytical results indicated that pH exceeding the ECMC Table 915-1 allowable levels and background were present at the St of Colo AM 4 wellhead and the FL01 location. Verification samples were collected to confirm the initial results. Final analytical results indicate that constituent concentrations were within the Table 915-1 allowable levels or site-specific background levels. The wellhead excavation and flowlines are depicted on Figures 1 and 2. The PID readings and soil sample results are summarized in Tables 1 and 2. The Form 44 is attached.

Davis St 20-16 wellhead cut and cap activities are pending. Separator riser sampling is pending due to the location within a 1/2-mile Bald Eagle active nest HPH and will be summarized in a subsequent Form 27 Supplemental report.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Between November 27 and November 29, 2023, soil samples were collected from the base of the St of Colo AM 4 wellhead cut and cap excavation [B01@6' (AM 4)], from the locations where the flowline risers were disconnected from the wellheads [WH01-RISER@3' (20-16) and WH01-RISER@3' (AM 4)] and from the locations where the flowlines turned at sharp angles (FL01@4', FL02@3', and FL03@4'). The samples were submitted for laboratory analysis of full list Table 915-1 constituents using ECMC-approved methods. Initial analytical results indicated that pH exceeding the ECMC Table 915-1 allowable levels and background were present at the St of Colo AM 4 wellhead and the FL01 location. Verification samples were collected to confirm the initial results. Final analytical results indicate that constituent concentrations were within the Table 915-1 allowable levels or site-specific background levels. The laboratory reports are attached.

Proposed Groundwater Sampling

☐ Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Groundwater was not encountered during wellhead cut and cap or flowline removal activities.

Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Additional Investigative Actions

☐ Additional alternative investigative actions described in attached Site Investigation Plan (summary):

Between November 27 and November 29, 2023, visual inspection and field screening of soils were conducted at four sidewall locations within the St of Colo AM 4 wellhead cut and cap excavation area, four locations at the ground surface adjacent to the excavation, and 14 flowline potholes. Based on the inspection and screening results, hydrocarbon-impacted soil was not observed at the screening locations, and no soil samples were submitted for laboratory analysis from these areas, in accordance with the ECMC Operator Guidance. A photographic log is attached.

On December 1, 2023, a soil gas survey was conducted at five soil vapor points installed adjacent to the former St of Colo AM 4 wellhead location following cut and cap operations. GEM 5000 field readings were all non-detect for methane at all soil vapor points. The soil vapor point locations are illustrated on Figure 1. The soil vapor field form is included as an attachment.

SITE INVESTIGATION REPORT

SAMPLE SUMMARY

Soil

Number of soil samples collected 8

Number of soil samples exceeding 915-1 8

Was the areal and vertical extent of soil contamination delineated? No

Approximate areal extent (square feet) 0

NA / ND

ND Highest concentration of TPH (mg/kg)

-- Highest concentration of SAR 4.26

BTEX > 915-1 No

Vertical Extent > 915-1 (in feet) 0

Groundwater

Number of groundwater samples collected 0

Was extent of groundwater contaminated delineated? No

Depth to groundwater (below ground surface, in feet)

Number of groundwater monitoring wells installed

Number of groundwater samples exceeding 915-1

Highest concentration of Benzene (µg/l)

Highest concentration of Toluene (µg/l)

Highest concentration of Ethylbenzene (µg/l)

Highest concentration of Xylene (µg/l)

Highest concentration of Methane (mg/l)

Surface Water

0 Number of surface water samples collected

Number of surface water samples exceeding 915-1

If surface water is impacted, other agency notification may be required.

OTHER INVESTIGATION INFORMATION

☐ Were impacts to adjacent property or offsite impacts identified?

☒ Were background samples collected as part of this site investigation?

Twelve background soil samples (NATIVE-BG01@3' through NATIVE-BG03@3', NATIVE-BG01@6' through NATIVE-BG03@6', Native-BG04@2.5' through Native-BG06@2.5' and Native-BG04@5' through Native-BG06@5') were collected from the native material adjacent to the wellhead cut and cap excavation. Twelve background soil samples were collected as part of the Dantzker 10-16/Daven O SA facility decommissioning activities (Remediation No. 30454) located in the same quarter section and a similar NRCS soil type. The background soil samples were submitted for laboratory analysis of EC, SAR, pH, boron, and/or Table 915-1 metals using ECMC-approved methods. Laboratory analytical results indicate that levels of EC, SAR, pH, arsenic, barium, lead and selenium are naturally high in the native soil. Background soil sample laboratory analytical results are summarized in Table 2. Background soil sample locations are depicted on Figure 3.

☐ Was investigation derived waste (IDW) generated as part of this investigation?

Volume of solid waste (cubic yards)

Volume of liquid waste (barrels)

☒ Is further site investigation required?

REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Final laboratory analytical results for soil samples collected from the base of the St of Colo AM 4 wellhead cut and cap excavation [B01@6' (AM 4)], from the locations where the flowline risers were disconnected from the wellheads [WH01-RISER@3' (20-16) and WH01-RISER@3' (AM 4)] and from the locations where the flowlines turned at sharp angles (FL01@4', FL02@3', and FL03@4') were within the ECMC Table 915-1 allowable levels or site-specific background levels; therefore, no soil was removed from the site during St of Colo AM 4 wellhead cut and cap activities or flowline removal activities. The excavation areas were backfilled and contoured to match pre-existing conditions.

REMEDICATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Final laboratory analytical results for soil samples collected from the base of the St of Colo AM 4 wellhead cut and cap excavation [B01@6' (AM 4)], from the locations where the flowline risers were disconnected from the wellheads [WH01-RISER@3' (20-16) and WH01-RISER@3' (AM 4)] and from the locations where the flowlines turned at sharp angles (FL01@4', FL02@3', and FL03@4') were within the ECMC Table 915-1 allowable levels or site-specific background levels. Davis St 20-16 wellhead cut and cap activities are pending. Separator riser sampling is pending due to the location within a 1/2-mile Bald Eagle active nest HPH and will be summarized in a subsequent Form 27 Supplemental report.

Soil Remediation Summary

☐ In Situ

☐ Ex Situ

_____ Bioremediation (or enhanced bioremediation)

_____ Excavate and offsite disposal

_____ Chemical oxidation

_____ If Yes: Estimated Volume (Cubic Yards) _____

_____ Air sparge / Soil vapor extraction

_____ Name of Licensed Disposal Facility or ECMC Facility ID # _____

_____ Natural Attenuation

_____ Excavate and onsite remediation

_____ Other _____

_____ Land Treatment

_____ Bioremediation (or enhanced bioremediation)

_____ Chemical oxidation

_____ Other _____

Groundwater Remediation Summary

_____ Bioremediation (or enhanced bioremediation)

_____ Chemical oxidation

_____ Air sparge / Soil vapor extraction

_____ Natural Attenuation

GROUNDWATER MONITORING

If groundwater has been impacted, describe proposed monitoring plan, including # of wells or sample points, monitoring schedule, analytical methods, points of compliance. Attach a groundwater monitoring location diagram.

REMEDIATION PROGRESS UPDATE

PERIODIC REPORTING

Approved Reporting Schedule:

☒ Quarterly☐ Semi-Annually☐ Annually☐ Other

☐ Request Alternative Reporting Schedule:

☐ Semi-Annually☐ Annually☐ Other

Rule 913.e:

After initial approval of a Form 27, the Operator will provide quarterly update reports in a Supplemental Form 27 to document progress of site investigation and remediation, unless an alternative reporting schedule has been requested by the Operator and approved by the Director. The Director may request a more frequent reporting schedule based on site-specific conditions.

Report Type:

☐ Groundwater Monitoring☐ Land Treatment Progress Report☐ O&M Report☐ Other

Adequacy of Operator's General Liability Insurance and Financial Assurance

Describe the adequacy of the Operator's general liability insurance and Financial Assurance to fully address the anticipated costs of Remediation, including the estimated remaining cost for this project (below).

If this information has been provided on a Form 27 within the last 12 months, provide the Document Number of that form.

KMOG has sufficient insurance and bonding to fully address the anticipated costs of Remediation, including the remaining estimated costs for this project. KMOG currently has over 40 million in bonds with the Energy and Carbon Management Commission. The cost for remediation is a preliminary estimate only, costs may change upwards or downward based on site-specific information. KMOG makes no representation or guarantees as to the accuracy of the preliminary estimate.

Operator anticipates the remaining cost for this project to be: \$ 22500

WASTE DISPOSAL INFORMATION

Was E&P waste generated as part of this remediation? ☐

Describe beneficial use, if any, of E&P Waste derived from this remediation project:

Volume of E&P Waste (solid) in cubic yards

E&P waste (solid) description

ECMC Disposal Facility ID #, if applicable:

Non-ECMC Disposal Facility:

Volume of E&P Waste (liquid) in barrels

E&P waste (liquid) description

ECMC Disposal Facility ID #, if applicable:

Non-ECMC Disposal Facility:

REMEDIATION COMPLETION REPORT

REMEDIATION COMPLETION SUMMARY

Is this a Final Closure Request for this Remediation Project? No ☐

If YES:

☐ Compliant with Rule 913.h.(1).☐ Compliant with Rule 913.h.(2).☐ Compliant with Rule 913.h.(3).

Do all soils meet Table 915-1 standards? ☐

Does the previous reply indicate consideration of background concentrations? ☐

Does Groundwater meet Table 915-1 standards? _____

Is additional groundwater monitoring to be conducted? _____

Operator shall comply with the ECMC 1000-Series Reclamation Requirements for all impacted and disturbed areas.

RECLAMATION PLAN

RECLAMATION PLANNING

Describe reclamation plan. Discuss existing and new grade recontouring; method and testing of compaction alleviation; and reseeding program, including location of new seed, seed mix and noxious weed prevention. Attach diagram or drawing.

The site will be reclaimed in accordance with ECMC 1000 Series Reclamation Rules.

Is the described reclamation complete? _____

Does the reclamation described herein constitute interim or final reclamation of the Oil and Gas Location?

☐ Interim

☐ Final

Did the Surface Owner provide the seed mix? _____

If YES, does the seed mix comply with local soil conservation district recommendations? _____

Did the local soil conservation district provide the seed mix? _____

SITE RECLAMATION DATES

Proposed date of commencement of Reclamation. _____

Proposed date of completion of Reclamation. _____

IMPLEMENTATION SCHEDULE

Per Rule 913.d.(2): Any change from the approved implementation schedule will be requested at least 14 days in advance, and the Operator may not make the change without the Director's approval.

PRIOR DATES

Date of Surface Owner notification/consultation, if required. 08/09/2023

Actual Spill or Release date, or date of discovery. _____

SITE INVESTIGATION DATES

Date of Initial Actions described in Site Investigation Plan (start date). 11/27/2023

Proposed site investigation commencement. 11/27/2023

Proposed completion of site investigation. 12/19/2024

REMEDIAL ACTION DATES

Proposed start date of Remediation. _____

Proposed date of completion of Remediation. _____

Per Rule 913.d.(2): Any change from the approved implementation schedule will be requested at least 14 days in advance, and the Operator may not make the change without the Director's approval.

☐ Change from approved implementation schedule per Rule 913.d.(2).

Basis for change in implementation schedule:
