## OPERATOR COMMENTS AND SUBMITTAL

Comments	<p>This is not an Oil and Gas project; this is a Deep Geothermal well strat project. This application was filled out using Order 1-326 as a guide. The Gas Capture field was answered yes to avoid an error in Webforms. There will not be any hydrocarbons produced from these strat wells. General description of timing and duration: Pad construction is planned to start Q1 2025 and will take approximately 30 days. Drilling is planned to start Q2 2025 and will take approximately 120 days. General description of tests and potential future use: The GLADE Deep Geothermal project looks to test the feasibility and cost of drilling ~20,000 feet down; specifically seeking data of the hard basement granite rock (including drill bit technologies, deviated nature, total MD, and attempting to link the 2 wellbores). If the drilling portion of the project is successful, then Oxy will enter into an evaluation period (up to 12 months) and gather various heat and thermosyphon effect data points. This data will help Oxy determine if large scale geothermal power production is plausible and economical in the Wattenberg area. A drilling pit Form 15 is also being submitted for this project (#403750374) OXY plans to use oil based drilling fluids in the intermediate hole section and then switch to water in production hole. A redacted version of the Water Plan was submitted. A non-redacted version was shown to John Noto and Laruen Mercer on 4/25/24 and a copy was emailed to them. No 2C was submitted with this application. Fourth NRCS Map unit symbol: 70 Valent sand, 3 to 9 percent slopes (0.2 acres in AOI / 1.2% of AOI) Please email response to both matt_wells@oxy.com and DJRegulatory@oxy.com</p>
