## OPERATOR COMMENTS AND SUBMITTAL

Comments

Per the approved Box Elder Comprehensive Area Plan, additional BMPs have been included in the Wildlife Protection Plan.

The Emergency Response Plan will be coordinated with and approved by the local responding agency.

The location is situated upstream of a NWI-mapped riverine feature. However, this feature does not exhibit any signs of an OHWM or wetland vegetation, indicating that it is not a jurisdictional water or wetland. Therefore, there are no wetlands immediately downgradient of the location that could be affected by its activities.

Operator certifies that the MLVT will be designed and implemented consistent with the ECMC Policy on the Use of Modular Large Volume Tanks in Colorado. MLVT Design Package, certified and sealed by a licensed professional engineer, is available upon request.

Manufacturer of MLVT: Harpoon  
 Size and Volume Up to one (1) 157' diameter/ 40,000 BBLs  
 Anticipated time frame 90 days

Since the location is greater than 2000' from a residential building unit, an Odor Mitigation Plan was not included with the submittal. Odor BMPs have been included in the BMP tab.

Since the location is not within 2000' of a Residential Building Unit, High Occupancy Building Unit, or School Facility located within a Disproportionately Impacted Community a map was not included.

A CPW pre-application consultation occurred on 8/2/22, and a summary of the consultation has been provided as an attachment to this application.

## Best Management Practices

<u>No</u>	<u>BMP/COA Type</u>	<u>Description</u>
1	Odor mitigation	<p>1. Operator will use a filtration system and additives to the drilling and fracturing fluids to minimize odors.</p> <p>2. Operator shall utilize a closed-loop, pit-less mud system for managing drilling fluids.</p> <p>3. Operator shall employ the use of drilling fluids with low to negligible aromatic content (IOGP Group III) during drilling operations after the surface casing is set and freshwater aquifers are protected.</p> <p>4. Operator shall remove drill cuttings daily and as soon as waste containers are full.</p> <p>5. Operator shall employ pipe cleaning procedures when removing the drill pipe from the hole; these procedures may include "wiping" the pipe before racking it in the derrick.</p> <p>6. If a justified complaint is received, the Operator may utilize a mud-chiller to reduce odor breakout and increase the concentration of odor-mitigating additives in the mud system.</p> <p>7. Operator will upgrade the proposed facilities to utilize compressed air pneumatics.</p> <p>8. Operator will upgrade the proposed facilities to utilize to a pressurized maintenance vessel system which minimizes the need for venting during maintenance operations.</p> <p>9. Operator will upgrade the proposed facilities to be energized with utility power reducing odors associated with internal combustion engines.`</p>
