Earth	Inadequate	Walls Sufficent		Inadequate
Comment:	<p>The secondary containment of the tank is not adequate to contain a spill. The design allows a spill to flow thru a culvert to the west toward the perennial stream at the southwest corner of the location. It is advised that secondary containment be constructed per Rule 603.o. with steel containment and liner. There have been previous spills that have occurred and secondary containment must be properly installed for potential spill containment. Previous corrective action has not been completed.</p>			
Corrective Action:	<p>Repair or install berms or other secondary containment devices per Rule 603.o Comply with Rule 902.b. for pollution prevention.</p>			Date:

Reclamation - Storm Water - Pit

Storm Water:

Loc Erosion BMPs	BMP Maintenance	Lease Road Erosion BMPs	Lease BMP Maintenance	Chemical BMPs	Chemical BMP Maintenance	Comment

Comment: There have been wattles installed at the southeast side of the pad however the area of concern is along the southwest area near the perennial creek. The slope of the location is directed towards the creek and there are insufficient BMP's installed. Additionally there is an eroded out culvert where the creek flows approximately 125' northwest of the location along the flowline which needs to be repaired. Previous corrective action has not been completed.

Corrective Action: Install or repair required BMPs per Rule 1002.f.(2)

Date: _____

Pits: NO SURFACE INDICATION OF PIT
