specify: _____

Was spill/release completely contained within berms or secondary containment? NO Was an Emergency Pit constructed? NO

Secondary containment, including walls & floor regardless of construction material, must be sufficiently impervious to contain any discharge from primary containment until cleanup occurs.

A Form 15 Pit Report shall be submitted within 30 calendar days after the construction of an emergency pit

Impacted Media (Check all that apply) Soil Groundwater Surface Water Dry Drainage Feature

Surface Area Impacted: _____ Length of Impact (feet): 10 Width of Impact (feet): 20

Depth of Impact (feet BGS): 22 Depth of Impact (inches BGS): _____

How was extent determined?

The vertical and horizontal extent of contamination was initially investigated via hydro excavation based on visual and olfactory observations. Seven groundwater monitoring wells were installed and soil samples from each boring were collected and submitted to Summit Scientific Inc. in Golden, Colorado and Origins Laboratory in Denver, Colorado and analyzed for ECMC Table 915-1 constituents. Groundwater samples were also submitted for analysis and demonstrated exceedances in all samples. Thus, the extent of contamination has not been determined and further delineation is required. Further investigation shall be conducted in Q3 of 2024 and reported under a Form 27.

CORRECTIVE ACTIONS#1 Supplemental Report Date: 07/11/2024Root Cause of Spill/Release Equipment Failure

Other (specify) _____

Type of Equipment at Point of Spill/Release: Other

If "Other" selected above, specify or describe here:

Compressor drain line.

Describe Incident & Root Cause (include specific equipment and point of failure)

The root cause of the release was due to a crack in the threads of a connection of the drain line on the compressor skid. Normal wear and tear and vibration caused by the compressor caused the line to crack.

Describe measures taken to prevent the problem(s) from reoccurring:

In effort to prevent this issue from reoccurring, PDC replaced the drain line with Schedule 80 piping designed to withstand the pressure and vibration caused by the compressor. In addition, PDC installed a pipe stand beneath the pipe to add bracing and help mitigate potential future damage.
