COMMENTS:

TEP Rocky Mountain LLC (TEP) is respectfully reporting the results of recent diagnostic testing and that the bradenhead on the Leverich WMC 512-18-793 has been connected to the sales line as part of a Pressure Management Plan. The diagnostic testing resulted from the bradenhead exceeding the bradenhead threshold pressure on January 17, 2024. The Form 17 reporting the results of the recent bradenhead test is included in the "Related Forms" section. TEP monitored the bradenhead pressure after performing the bradenhead test and determined that the bradenhead pressure will build and sustain pressures exceeding the ECMC calculated threshold pressure of 341 psi. On March 12, 2024, TEP connected the bradenhead to the sales line utilizing an existing subsurface two-inch steel line with a check valve. A typical diagram is attached which depicts the bradenhead connection. The average sales line pressure for this well is 200-230 psi.
