SAFETY SETBACK INFORMATION

Required for change of Surface Location.

Distance from Well to nearest:

Building: _____ Feet

Building Unit: _____ Feet

Public Road: _____ Feet

Above Ground Utility: _____ Feet

Railroad: _____ Feet

Property Line: _____ Feet

INSTRUCTIONS:
- Specify all distances per Rule 308.b.(1).
- Enter 5280 for distance greater than 1 mile.
- Building - nearest building of any type. If nearest Building is a Building Unit, enter same distance for both.
- Building Unit – as defined in 100 Series Rules.

SUBSURFACE MINERAL SETBACKS

Required for change of Top and/or Base of Productive Zone. Enter 5280 for distance greater than 1 mile.

Is this Well within a unit? _____

If YES:

Enter the minimum distance from the Completed Zone of this Well to the Unit Boundary: _____ Feet

Enter the minimum distance from the Completed Zone of this Well to the Completed Zone of an offset Well within the same unit permitted or completed in the same formation: _____ Feet

If NO:

Enter the minimum distance from the Completed Zone of this Well to the Lease Line of the described lease: _____ Feet

Enter the minimum distance from the Completed Zone of this Well to the Completed Zone of an offset Well producing from the same lease and permitted or completed in the same formation: _____ Feet

Exception Location

☐ If this Well requires the approval of a Rule 401.c Exception Location, enter the Rule or spacing order number and attach the Exception Location Request and Waivers. _____

RECLAMATION

INTERIM RECLAMATION

☐ Interim Reclamation will commence approximately _____

Per Rule 1003.e.(3) operator shall submit Sundry Notice reporting interim reclamation is complete and site is ready for inspection when vegetation reaches 80% coverage.

☐ Interim reclamation complete, site ready for inspection.
Per Rule 1003.e(3) describe interim reclamation procedure in Comments below or provide as an attachment and attach required location photographs.

Field inspection will be conducted to document Rule 1003.e. compliance

FINAL RECLAMATION

☐ Final Reclamation will commence approximately _____

Per Rule 1004.c.(4) operator shall submit Sundry Notice reporting final reclamation is complete and site is ready for inspection when vegetation reaches 80% coverage.

☐ Final reclamation complete, site ready for inspection. Per Rule 1004.c(4) describe final reclamation procedure in Comments below or provide as an attachment.

Field inspection will be conducted to document Rule 1004.c. compliance

COMMENTS:

TEP Rocky Mountain LLC (TEP) is reporting the results of diagnostic testing and requesting approval to connect the bradenhead on the Savage RMV 15-35 well to an existing enclosed combustor on the location as part of a Pressure Management Plan. The diagnostic testing resulted from the bradenhead exceeding the calculated bradenhead threshold pressure on January 10, 2024. The Form 17 reporting the results of the recent bradenhead test is included in the "Related Forms" section. The bradenhead test results did not indicate any communication between the surface casing annulus and the production casing, confirming production casing integrity. The flow rate of gas during the test was de minimis and the results of this test were consistent with historical annual test results that were also performed through a one-half inch valve.

TEP has monitored the bradenhead pressure since performing the bradenhead test and determined that the bradenhead pressure will build and sustain pressures exceeding the ECMC calculated threshold pressure of 99 psi. TEP has performed a detailed diagnostic analysis and determined the following:
• A comparison of the analytical results from both the bradenhead and produced gases indicates that the producing interval is not the source of bradenhead pressure. The results of these compositional analyses are included in the attachments.
• TEP has reviewed the cement bond log and confirmed the top of cement is located at 3,580 feet, which is 342 feet above the top of the producing Mesaverde formation located at 3,922 feet, and 1,239 feet above the top perforation located at 4,819 feet.
• Investigation of nearby water wells has determined that the deepest water well in the area was drilled to a depth of 215 feet, which is 114 feet above the RMV 15-35 surface casing shoe depth of 329 feet.

TEP is requesting ECMC approval to connect the bradenhead on the Savage RMV 15-35 well to an existing enclosed combustor to mitigate the bradenhead pressure. Third-party gathering line pressures in the area typically range from 100-125 psi, averaging 110 psi, which exceeds the ECMC's calculated bradenhead threshold pressure of 99 psi. TEP expects further increases in the third-party gathering line pressure due to additional development in the area. Connecting the bradenhead to the enclosed combustor is TEP's only viable option to manage the bradenhead pressure and maintain a pressure below the ECMC's calculated threshold pressure.

GAS CAPTURE

VENTING AND FLARING:

Operation type: _____ Operational phase requiring venting/flaring: _____

Reason for venting/flaring: _____

Describe Other reason for venting/flaring:

Describe why venting or flaring is necessary. If reporting per Rule 903.b.(2), 903.c.(3).C, or 903.d.(2), include the explanation, rationale, and cause of the event:

Describe how the operation will protect and minimize adverse impacts to public health, safety, welfare, the environment, and wildlife resources. If reporting per Rule 903.d.(2), include BMPs used to minimize venting on the BMP Tab:

Total volume of gas vented or flared: _____ mcf ☐ estimated ☐ measured

Total duration of emission event: _____ hours ☐ consecutive ☐ cumulative

Submit a single representative gas analysis via Form 43 to create a Sample Site Facility ID# for this Location. Reference the Form 43 document number on the Related Forms tab.

Engineer	Please add more information on diagnostics for the source and cause of the pressure. Review the CBL and provide information if there is adequate coverage to protect water wells and the environment. Please collect a BH and production gas sample for analytics. What is the average flowrate of the gas? More thorough diagnostic information should be included.	04/15/2024
