COMMENTS:

After a Form 17 Bradenhead Test (Doc#: 403818522), the N Parachute EF08A-31 N30 595 has been identified as having Continuous Flow after the 30-minute blowdown test. After a 7-day shut in period, the bradenhead test shows an initial shut-in bradenhead pressure of 359 psi with 35 psi at the expiration of the 30-minute blowdown. A mitigation plan was previously set up that consisted of tying the bradenhead line into sales (Doc. #403675785). The plan has been effective at maintaining pressure below the 751 psi threshold since line pressure consistently sits around 170 psi, see attached. Therefore, Caerus proposes to make no changes and continue with its current pressure management plan. Note: Pressures on the production casing string during the bradenhead blow-down test confirm casing integrity is not compromised.
