Description

Drilling/Completion Operations	<p>A closed loop system will be used.</p> <p>DRILL CUTTINGS: Drill cuttings will be stored in steel bins. Cuttings samples may be collected when drilling is initiated for waste characterization. Based on the analytical results, drill cuttings will be managed and disposed of pursuant to ECMC rule 905.e.</p> <p>CONTAINMENT: During completions, Caerus may utilize 15-20 temporary tanks to hold frac fluid and flowback water.</p> <p>FLOWBACK & STIMULATION: As wells progress from the drilling stage to the completions stage temporary working tanks will be situated on the ELU A18-495 Well and Frac Pad. Caerus estimates that there could be 15-20 500-bbl tanks on location for roughly 18-months as the wells progress from the drilling to completions stage during Sim-Ops. The contents of the tanks will contain produced water. The entire Oil and Gas Location for the ELU A18-495 will include a compacted earthen berm perimeter around the operational area for ELU A18-495 Well Pad. Once the working tanks are no longer necessary for operations the tanks will be removed.</p>
