**Proposed Soil Sampling**

Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Grab confirmation soil samples were collected from the produced water vessel(s) excavation, beneath the ground oil tank(s), and at the separator(s). Additionally, soil samples will be collected at any points of material change and/or hammer unions, directional changes, as well as at the bell holes on either side of a waterway, where applicable. Soil samples will be analyzed by a certified laboratory for TPH (total volatile [C6-C10] and extractable [C10-C36] hydrocarbons), organic compounds in soil per COGCC Table 915-1, and EC, SAR, pH, and boron. All samples collected will be analyzed by a certified laboratory using approved COGCC laboratory analysis methods.

## OTHER INVESTIGATION INFORMATION

Were impacts to adjacent property or offsite impacts identified?

Were background samples collected as part of this site investigation?

Eleven background samples between Jan. 2023 and September 2023 were collected from an area not impacted by oil and gas development at similar depths and lithologies as confirmation samples collected at the Beeler location and analyzed for ECMC Table 915-1 metals and soil suitability for reclamation standards (pH, EC, SAR, and Boron). See attached Tables 3 and 4 for details.

Was investigation derived waste (IDW) generated as part of this investigation?

Volume of solid waste (cubic yards) \_\_\_\_\_

Volume of liquid waste (barrels) \_\_\_\_\_

Is further site investigation required?

Elevated metals As and Se were observed in multiple locations in the Beeler Tank Battery excavations. Soil will be resampled and analyzed for As at the B04@7.0', SW02@6.0', SE03@6.0', and SE04@6.0' sample locations and Se at the B01@7.0', NW01@6.0', NE01@6.0', and SE01@6.0' sample locations at the same depth where the initial elevated concentrations were observed. Noble will request an NFA be granted if the reanalyzed samples are within the Table 915-1 concentration range.

Additional background samples will be used to justify elevated metals concentrations if the resampled results exceed outside the Table 915-1 concentration standards and cannot be attributed to native soil conditions based on the current background soil characterization. A minimum of five additional samples will be collected for additional background characterization.

## REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No

### SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Excavation

### REMEDICATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Data from the site investigation completed September 5, 2023 confirmed pH and SAR in the previously exceeding B02 7 Ft sample location is compliant with the ECMC Table 915-1 soil suitability reclamation standards. Further, resampled locations SE03 6 Ft and B02 (2) 7 Ft were observed to be in compliance with the ECMC Table 915-1 standards for metals.

Should metals concentrations (As and Se) > 915-1 standards remain following resampling of the locations noted in the above Site Investigation Plan alternative remedial actions will be evaluated.
