DESCRIPTION OF IMPACT

Impacted?	Impacted Media	Extent of Impact	How Determined
UNDETERMINED	GROUNDWATER	TBD	Groundwater samples/laboratory analytical results
UNDETERMINED	SOILS	TBD	Inspection/soil samples/laboratory analytical results

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Flowline removal activities were completed at the HSR-Perconte 16-23 flowline on May 14 through July 5, 2024. The HSR-Perconte 16-23 wellhead was previously plugged and abandoned on October 24, 2017. Groundwater was not encountered in the flowline removal pothole excavation areas. Visual inspection and field screening of soils around the flowline potholes following flowline removal activities was conducted and soil samples (FL-B01@4', FL-B17@4', FL-B18@4', FL-B19@4') were submitted for laboratory analysis to determine if a release occurred. Initial laboratory analytical results indicated that the barium concentration in soil sample FL-B18@4' exceeded the applicable ECOM Table 915-1 standard and background limit. As such, a verification soil sample is in the process of being collected to verify the barium concentration in soil sample FL-B18@4'. The laboratory analytical results of the verification soil sample will be summarized in a forthcoming quarterly Form 27-Supplemental Site Investigation and Remediation Workplan. A topographic Site Location Map showing the geographic setting of the site location is provided as Figure 1. Soil sample location and field screening data are presented in Table 1. The soil sample and field screening locations are illustrated on Figure 2. The laboratory analytical reports are provided as Attachment A. The field notes and a photographic log are provided as Attachment B.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

On May 14 through July 5, 2024, soil samples were collected from the locations where the flowline risers were disconnected at the wellhead (FL-B19@4') and separator (FL-B01@4'), and from both sides of an irrigation ditch that the former flowline crossed (FL-B17@4', FL-B18@4'). The soil samples were submitted for laboratory analysis of the full ECOM Table 915-1 analytical suite using ECOM-approved methods. Laboratory analytical results indicated that the barium concentration in soil sample FL-B18@4' exceeded the applicable ECOM Table 915-1 standard and background limit. As such, a verification soil sample is in the process of being collected to verify the barium concentration in soil sample FL-B18@4'. The laboratory analytical results of the verification soil sample will be summarized in a forthcoming quarterly Form 27-Supplemental Site Investigation and Remediation Workplan. Soil analytical results are presented in Tables 2 through 5.

Proposed Groundwater Sampling

☒ Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Groundwater was not encountered during flowline removal activities. If groundwater is encountered during remaining assessment activities, a minimum of one grab sample will be collected as soon as practical. Groundwater samples will be submitted to an accredited laboratory for all analytes listed in ECOM Table 915-1 Organic Compounds in Groundwater (benzene, toluene, ethylbenzene, total xylenes (BTEX), naphthalene, 1,2,4-trimethylbenzene (1,2,4-TMB), and 1,3,5-trimethylbenzene (1,3,5-TMB)) and Groundwater Inorganic Parameters (total dissolved solids (TDS), chloride, and sulfate) using standard methods appropriate for detecting the target analytes in ECOM Table 915-1.

Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Additional Investigative Actions

☐ Additional alternative investigative actions described in attached Site Investigation Plan (summary):

On May 14 and May 15, 2024, visual inspection and field screening of soils was conducted at 15 flowline removal potholes. Based on the inspection and screening results, hydrocarbon impacted soil was not observed at the screening locations, and no soil samples were submitted for laboratory analysis from these areas in accordance with the ECOM Operator Guidance.
