COMMENTS:

During the Form 17 performed on 10/25/2023 we obtained a bradenhead gas sample. The sample had 95.9% nitrogen and 0.2% methane. Nitrogen is used to pull fluid from the bradenhead. Because the cement passes the well's producing zone, some residual methane is expected. We also obtained a production gas sample on 10/25/2023. This well was added to our Mitigation program on 11/17/2023. Chevron performed a fluid pull on 11/6/2023 that had a starting surface casing pressure of 26 psi. and when the bradenhead was opened 1 gallon in 1 minute flowed for a calculated initial flow rate of 1.0 gallons/minute. During the fluid pull we collected 50 gallons of fluid from the bradenhead. We obtained a bradenhead gas and water sample during the fluid pull. The sample had 94.2% nitrogen and 1.4% methane. Nitrogen is used to pull fluid from the bradenhead. Nitrogen is used to pull fluid from the bradenhead. Because the cement passes the well's producing zone, some residual methane is expected. On 7/26/2024 a Form 17 was completed with a starting pressure of 5 and an ending pressure of 0 psi. This well is in compliance with Order 1-232, and we request the well be returned to annual testing.
