SAFETY SETBACK INFORMATION

Required for change of Surface Location.

Distance from Well to nearest:

- Building: _____ Feet
- Building Unit: _____ Feet
- Public Road: _____ Feet
- Above Ground Utility: _____ Feet
- Railroad: _____ Feet
- Property Line: _____ Feet

INSTRUCTIONS:

- Specify all distances per Rule 308.b.(1).
- Enter 5280 for distance greater than 1 mile.
- Building - nearest building of any type. If nearest Building is a Building Unit, enter same distance for both.
- Building Unit – as defined in 100 Series Rules.

SUBSURFACE MINERAL SETBACKS

Required for change of Top and/or Base of Productive Zone. Enter 5280 for distance greater than 1 mile.

Is this Well within a unit? _____

If YES:

Enter the minimum distance from the Completed Zone of this Well to the Unit Boundary: _____ Feet

Enter the minimum distance from the Completed Zone of this Well to the Completed Zone of an offset Well within the same unit permitted or completed in the same formation: _____ Feet

If NO:

Enter the minimum distance from the Completed Zone of this Well to the Lease Line of the described lease: _____ Feet

Enter the minimum distance from the Completed Zone of this Well to the Completed Zone of an offset Well producing from the same lease and permitted or completed in the same formation: _____ Feet

Exception Location

If this Well requires the approval of a Rule 401.c Exception Location, enter the Rule or spacing order number and attach the Exception Location Request and Waivers. _____

VENTING AND FLARING:

Operation type: _____ Operational phase requiring venting/flaring: _____

Reason for venting/flaring: _____

Describe Other reason for venting/flaring:

Describe why venting or flaring is necessary. If reporting per Rule 903.b.(2), 903.c.(3).C, or 903.d.(2), include the explanation, rationale, and cause of the event:

Describe how the operation will protect and minimize adverse impacts to public health, safety, welfare, the environment, and wildlife resources. If reporting per Rule 903.d.(2), include BMPs used to minimize venting on the BMP Tab:

Total volume of gas vented or flared: _____ mcf estimated measured

Total duration of emission event: _____ hours consecutive cumulative

Submit a single representative gas analysis via Form 43 to create a Sample Site Facility ID# for this Location. Reference the Form 43 document number on the Related Forms tab.

GAS CAPTURE PLAN

Describe the plan to connect to a gathering line or beneficially use the gas; include anticipated timeline:

A Gas Capture Plan that meets the requirements of Rule 903.e is attached.

H2S REPORTING

Intentional release of H2S gas due to Upset Condition or malfunction.

Intent to temporarily abandon well with potential H2S concentration >100 ppm.

Data Fields in this section are intended to document Sample and Location Data associated with the collection of a Gas Sample that is submitted for Laboratory Analysis.

Gas Analysis Report must be attached.

H2S Concentration: _____ in ppm (parts per million)

Date of Measurement or Sample Collection _____

Description of Sample Point:

Absolute Open Flow Potential _____ in CFPD (cubic feet per day)

Description of Release Potential and Duration (If flow is not open to the atmosphere, identify the duration in which the container or pipeline would likely be opened for servicing operations.):

Distance to nearest occupied residence, school, church, park, school bus stop, place of business, or other areas where the public could reasonably be expected to frequent: _____

Operator Comments:

Per ECMC's request per NOAV #403890794, PRM is submitting engineered culverted bridge plans for review in support of a future access road across Beaver Creek that will be included in a new OGDG to be submitted in fall/winter 2024. These plans are unrelated to the Duncan Facility and have yet to be implemented. The use of the creek crossing relates to the flowline installation included in the Form 2A No. 403602757 for the Duncan Facility (part of the WELBA PEAK 2 OGDG): PRM previously used the improved, existing ranch access road that ran adjacent to an existing agriculture fence row to cross Beaver Creek. This crossing was used as a temporary alternate access route for light-duty truck traffic to access the flowline during construction. PRM consulted on-site with CPW on the temporary alternate crossing for the flowline installation, in addition to the future plans to install a culverted bridge crossing at this location. The improved ranch access road is currently closed to all vehicular traffic during site reclamation. The temporary alternate access road will no longer be used for any oil and gas activities associated with access to the existing pipeline. All future traffic across Beaver Creek at this location associated with any oil and gas operations will be by the attached bridge crossing after forthcoming OGDG submission and approval. The surface owner will also have access to this future bridge crossing for continued ranching operations. PRM is responsible for obtaining the necessary local, state, and federal permits needed for construction. Again, these engineered plans, with potential for minor modifications to remove outdated information, will be submitted with the relevant forthcoming OGDG in fall/winter 2024.

I hereby certify all statements made in this form are, to the best of my knowledge, true, correct, and complete.
