General Comment:

This is a follow up desktop final reclamation inspection to FIR Doc.# 697505362 submitted on 7/1/2024.

The previous and referenced final reclamation inspection required the Operator to consult with CPW to determine a proper seed mix and provide documentation of the consultation. CPW Grassland Habitat Coordinator approved a final seed mix on August 5, 2024. Operator provided the required information via FIR Doc.# 403877975.

Comment: **ECMC staff, Chris Binschus, communicated via email on August 1, 2024 that Staff will be asking for a Final Reclamation Plan (Plan) to control, monitor and manage Cereal rye, commonly referred to as feral rye (Secale cereale). It likely came in with the straw mulch but it was observed throughout the reclamation areas. This is an aggressive winter annual grass that can easily form a monoculture that out competes and prevents other vegetation from establishing. Staff will be asking for this Plan to be submitted by September 16th.**

Corrective Action:	Operator shall submit a Reclamation Plan (Plan) and ECMC encourages the Plan be assembled and implemented by an experienced, professional reclamation contractor. The Plan shall detail the action plan to control, monitor and manage Cereal rye (Secale cereale) from all disturbance areas.	Date	09/16/2024
	Operator will be required to control, monitor and manage all Cereal rye until all Cereal rye has been eliminated. If Cereal rye moves off location, Operator will be responsible for eliminating all Cereal rye off location.		
	Submit the Plan by no later than September 16, 2024 via a Form 4 Sundry Notice to the attention of Chris Binschus.
