COMMENTS:

TEP Rocky Mountain LLC (TEP) respectfully reports the results of recent diagnostic testing on the PA 431-6. The diagnostic testing resulted from the bradenhead exceeding the ECMC calculated threshold pressure of 213 psi on June 6th, 2024. The Form 17 reporting the results of the recent bradenhead test is included in the "Related Forms" section. The resulting diagnostic testing indicated a potential leak in the production casing. TEP is reviewing the economics of repairing the production casing or to commence with plug and abandonment operations. Pending the completion of the review, TEP will submit the proper Forms to request ECMC approval of the proposed remedial work or the plug and abandonment operations.

Please note that TEP received approval from ECMC's Aaron Katz to extend the sixty-day reporting deadline to September 5th, 2024, and allow TEP engineering staff to complete the diagnostic evaluation of the PA 431-6.
