COMMENTS:

Chevron proposes attempting a pre-frac mitigation using the Local Expansion Tool from Renegade in an attempt to reduce bradenhead pressure and ultimately move forward with completions. The local expander tool uses a controlled mechanical expansion to dent the casing, densify the cement behind casing and seal off microannuli. Diagnostic logs indicate that this well is a good candidate for this technology. A previous trial of this tool rendered positive results as far as mitigating BH pressure, but impacted casing integrity, except in the wells where indentions were limited to a smaller expansion ratio. CVX proposes making indentions between 50' above the Niobrara and 2400' MD. The expansion ratio will be limited to preserve casing integrity. If we still have surface casing pressure remaining after the operation, we plan to re-install a surface kit and monitor pressure build-ups periodically.
