LOCATION CHANGE COMMENTS

A geomagnetic drone flight was conducted by OWP to map flowlines. No evidence of a well was identified at the location where this well was plotted, based on historical records. An isolated anomaly was identified exactly 1250' due south, which is believed to be this well. There is a depression at the surface, indicative of subsidence of disturbed soil of a plugged well. Images attached. Coordinates collected from 3rd party contractor using state of the art Trimble GPS, PDOP not reported.
