· Comments: Well work for approved plan to install a PT on the SC and tie the SC in has been completed. Please see attached Cygnet image for conditions of well at tie-in. Surface casing PT data is currently reading ~135-180 psi after installation, fluctuating with plunger runs. Casing pressure has remained stable at ~400 psi indicating there is no expected communication at this time. Note: The 2024 BH test was also a failure. Additional diagnostics and further information will be provided on a new PMP/Form 4 referencing the 2024 test. We will collect samples for additional data in 2024.
