17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

At 2500 feet encountered nice blow of gas, from 2505-2508 feet more gas, 2510 - 2523 ft. oil recovered while drilling to surface in four minutes, this oil about 20 Bblss was followed by heavy rotary mud, this mud on laboratory test showed quebracho, sodium phosphate and baroid, no doubt coming from a deep well drilled in this area in the past to Weber.

We battled this mud inflow for five days, slow process, however, we were gaining and getting some oil showings and new gas, the complete ~~clearing~~ clearing of this situation, if ever, will take a month or more so we will continue the battle in the spring when the weather is more compatable.

springtime

Well presently shut in, "awaiting ~~springtime~~ in the Rockies"
