COMMENTS:

A Form 17 with a starting surface casing pressure of 260 psi was submitted on 08/20/2024. A surface kit was installed on this well and it was shut in again after a period of abatement. The Form 17 conducted on 08/29/2024 showed a starting surface casing pressure of 62 psi after >7 days shut-in. CVX requests permission to proceed with frac on this well. We will monitor pressure continuously and shut down to investigate if pressure exceeds 200 psi. If pressure increases to greater than 50 psi, we will continue with surface kit abatement and follow up with other mitigation strategies via form 4.
