Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by ECMC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Pursuant to ECMC Rule 911 a site investigation was conducted pertaining to the STEPHENS J31-09 wellhead cut and cap and flowline removal. This flowline was previously abandoned-in-place due to a water line and was subsequently removed. The wellhead was cut and capped per ECMC rules.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

A grab confirmation soil sample was collected at the wellhead excavation and flowline change of direction. Soil samples were analyzed by a certified laboratory for TPH (total volatile [C6-C10] and extractable [C10-C36] hydrocarbons) organic compounds in soil per ECMC Table 915-1, EC, SAR, pH, and boron. All samples collected will be analyzed by a certified laboratory using approved ECMC laboratory analysis methods. Samples were collected at the flowline terminus in relation to Doc# 402971253 (data included in attachments).

Proposed Groundwater Sampling

OPERATOR COMMENT

Pursuant to ECMC Rule 911 a site investigation was conducted pertaining to the STEPHENS J31-09 wellhead cut and cap and flowline removal. This flowline was previously abandoned-in-place due to a water line and was subsequently removed. The wellhead was cut and capped per ECMC rules. Samples were collected from the site of wellhead excavation as well as along all change of directions along the flowlines. Further samples were collected in relation to the STEPHENS J-65N66W 31SWSE tank battery decommission and removal (ECMC doc# 402971253). All samples were analyzed by an ECMC certified laboratory for TPH (total volatile [C6-C10] and extractable [C10-C36] hydrocarbons) organic compounds in soil per ECMC Table 915-1, EC, SAR, pH, and boron. Slightly elevated pH levels were observed at the flowline terminus but were consistent with background results in the area. As a result, we are requesting NFA designation.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
