**PROPOSED SAMPLING PLAN**

**Proposed Soil Sampling**

Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Grab confirmation soil samples were collected from the produced water vessel(s) excavation, beneath the ground oil tank(s), and at the separator(s). Soil samples were analyzed by a certified laboratory for TPH (total volatile [C6-C10] and extractable [C10-C36] hydrocarbons) organic compounds in soil per ECMC Table 915-1, and EC, SAR, pH, and boron. All samples collected were analyzed by a certified laboratory using approved ECMC laboratory analysis methods.

**Additional Investigative Actions**

Additional alternative investigative actions described in attached Site Investigation Plan ( summary ):

Visual inspection at the tank battery area occurred during abandonment activities. Field personnel field screened all disturbed areas using visual and olfactory senses to determine if laboratory confirmation sampling was required. The ECMC Tank Battery and Produced Water Vessel Closure Checklists were utilized and filled out during the abandonment process. A photolog is attached.

**OPERATOR COMMENT**

This F27 submittal serves as sampling time update only. The operator is evaluating remedial options to address arsenic concentrations in confirmation soil samples exceeding the Table 915-1 Residential Soil Screening Level Concentrations. Operator will provide a remedial plan and/or additional data to address elevated arsenic concentrations at the site.

The operator maintains the assertion that As concentrations are related not to a petroleum release but to the chemical variability of native soil at the Dinnel C 26-21D, 18 former tank battery location since organic and inorganic impacts, barring As, were not observed site wide. Based on this assertion the likelihood of determining a source is improbable.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
