Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by ECMC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Pit was previously backfilled. Historic Google Earth imagery indicates that the pit was closed some time between 2006 and 2011.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Please see the attachment for proposed soil sampling.

Proposed Groundwater Sampling

☐ Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

A visual inspection was performed looking for signs of stained soil and potential leeching of pit components that may have impacted surface or groundwater, none were found. Groundwater was not encountered during previous sampling. If groundwater is encountered during completion of delineation or remediation, COGCC will be notified immediately.

Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

A visual inspection was performed looking for signs of stained soil or potential leeching of pit components that may have impacted surface or groundwater, none were found.

☒ Is further site investigation required?

Based on analytical results, horizontal delineation of impacted soil in this pit is considered incomplete. Vertical impacted soil delineation is also considered incomplete because soil impacts were observed at the depth of refusal in the center borehole and bedrock was not recovered to confirm refusal occurred at bedrock surface. Please see the attachment for plan to complete delineation.
