## DESCRIPTION OF IMPACT

Impacted?	Impacted Media	Extent of Impact	How Determined
UNDETERMINED	GROUNDWATER	NA	lab analysis if encountered
UNDETERMINED	SOILS	NA	lab analysis

## INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

A site assessment will be conducted pursuant to ECMC rule 911 at the SE CAMPO UNIT 601W produced water injection wellhead cut & cap and its associated offsite injection line to be abandoned in place.

## PROPOSED SAMPLING PLAN

### Proposed Soil Sampling

Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

A grab soil sample will be collected from the floor of the excavation or the area showing the highest degree of impact during field screening activities at the wellhead cut & cap excavation. Additionally, soil samples will be field screened at the N-E-S-W sides of the wellhead excavation. If impacts are not apparent from visual, olfactory, and PID screening, the floor soil sample will be analyzed by a certified laboratory for full ECMC Table 915-1. If there are any apparent potential impacts, grab soil samples from those locations will be collected and analyzed for full ECMC Table 915-1. Grab background soil samples will be collected from outside of the location perimeter at similar depths and analyzed for ECMC Table 915-1 Soil Suitability for Reclamation and Metals. All samples collected will be analyzed by a certified laboratory using approved ECMC laboratory analysis methods.

### Proposed Groundwater Sampling

Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

If groundwater is encountered during site assessment, a grab groundwater sample will be collected and analyzed for ECMC Table 915-1 Organic Compounds in Groundwater and Groundwater Inorganic Parameters.

### Proposed Surface Water Sampling

Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

## Additional Investigative Actions

Additional alternative investigative actions described in attached Site Investigation Plan ( summary ):

Field staff will use a PID to field screen a minimum of every 250' adjacent to the injection line to determine if laboratory analysis is required up to an isolation valve marked on attached Figure 3. The assessment for the remainder of the injection line, which is co-located in a shared trench from that isolation valve to the pump house manifold at the central production facility, is addressed under remediation projects 34352 and 35550. A grab soil sample will be collected for lab analysis at the change in direction at the isolation valve. Injection line grab soil samples submitted to the lab will be analyzed for full Table 915-1. ECMC Wellhead and Flowline Closure Checklists will be completed during the assessment. A photolog will be submitted on a Subsequent Form 27.
