## OPERATOR COMMENT

This Form 27 is being submitted to include the decommissioning results for the former Village 16S-DU Flowline location. Following the receipt and review of laboratory analytical results, all constituents were observed below the applicable ECMC Table 915-1 standards and/or applicable background concentrations with the exception of cadmium in FLR01-S@3' and lead in FLR01-W@3'. A proposal to evaluate if cadmium and lead concentrations are indicative of native material conditions is presented in the Site Investigation Report section of this Form 27.

The wellhead is currently planned for future decommissioning, at which time soil sampling and screening samples will be taken as per the approved sampling plan attached to Initial Form 27 Document Number 403802992, and the confirmation soil sample collected adjacent to the wellhead will be submitted for laboratory analysis of the full ECMC Table 915-1 suite. Pursuant wellhead decommissioning, all laboratory analytical samples will be analyzed for full ECMC Table 915-1 contaminants of concern. Additional SSI activities will be proposed (as applicable) on a future Form 27 if further investigation is required.

Quarterly reporting will be conducted until closure criteria are achieved for the remediation project. The results of the supplemental site investigation will be submitted on a subsequent Form 27.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
