

All gas piped to processing plant and separated there.

Oil will be trucked offsite if encountered

Produced water will be trucked offsite

PRODUCTION

Legend	Status	Quantity
- Wellhead	Permanent	1
Manual Shut off Valve	Permanent	20
MR – Meter Run	Permanent	1
LA – Level Alarm	Permanent	2
PR – Pressure Relief	Permanent	1
Heated Separator	Permanent	1
Oil Tank – 300 <u>bbl</u>	Permanent	1
Water Tank – 300 <u>bbl</u>	Permanent	1

PRELIMINARY PROCESS FLOW DIAGRAM

Wavetech Helium, Inc.

1 Wavetech Hadachek 21-23

Sec. 23 T13S R42W

Cheyenne County, Colorado

Note: The well will be a conventional vertical well with no hydraulic fracturing, stimulation, or flowback. All formation water during well completion and all produced water during production will flow to an on-site separator for separation of oil and water. Oil and water will be stored in tanks. Oil will be trucked to a commercial transfer point. Water will be trucked for disposal at a commercial UIC well. The gas stream will be piped underground to the existing Ladder Creek Gathering System operated by Tumbleweed Midstream for processing off site.
