COMMENTS:

On 04/17/2024 we obtained a bradenhead gas sample. The composition was 0 mol % ethane, 0 mol % hydrogen, 5 mol % methane, and 92 mol % nitrogen. This samples indicates Bradenhead gas to be thermogenic gas with somewhat similar composition as the production gas sample. Because the cement passes the well's producing zone, some residual methane is expected. We also obtained a production gas sample on 04/17/2024. This well was added to our Mitigation program on 03/19/2024. Chevron performed a fluid pull on 04/10/2024. During the fluid pull we collected 100 gallons of fluid from the bradenhead. On 10/03/2024 a Form 17 was completed with a starting pressure of 0 and an ending pressure of 0 psi. This well is in compliance with Order 1-232, and we request the well be returned to annual testing.
