COMMENTS:

TEP Rocky Mountain LLC (TEP) is reporting the results of recent diagnostic testing on the BARRETT RMV 20-35. The diagnostic testing was initiated when TEP initially thought the bradenhead pressure had exceeded the ECMC calculated bradenhead threshold pressure on April 4, 2024. The Form 17 reporting the results of the recent bradenhead test is included in the "Related Forms" section. TEP discovered that our internal well files had an incorrect surface casing depth of 300 feet (TVD) which was utilized to generate a calculated bradenhead threshold pressure of 90 psi in our system. TEP has updated our system to reflect the correct MD/TVD of the surface casing to 333 feet and the correct ECMC calculated bradenhead threshold pressure of 100 psi. The bradenhead pressure has been monitored since performing the bradenhead test and the pressure has stabilized and is currently remaining below the calculated threshold pressure of 100 psi. The bradenhead pressure was 90 psi on May 9, 2024. TEP will continue to monitor the bradenhead pressures as part of our monthly monitoring program and report any future bradenhead threshold pressure exceedances as required by Rule.
