Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

At approximately 8am on 11/28/2024, a release was discovered at the off-location flowline near the NWAU #12 tank battery. The flowline line was immediately shut in and spill was contained. Approximately 2-5bbls of oil and ~15-20 bbls of produced water was released. A hydrovac was called onto location to remove the surface fluids. Mull is coordinating with contractors to determine the caused the release at the flow-line and to make repairs. The flowline will be shut in until assessment and repair has been completed.
