**PROPOSED SAMPLING PLAN**

**Proposed Soil Sampling**

Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Grab confirmation soil samples were collected from the produced water vessel(s) excavation, beneath the ground oil tank(s), and at the separator(s). Soil samples were analyzed by a certified laboratory for TPH (total volatile [C6-C10] and extractable [C10-C36] hydrocarbons) organic compounds in soil per ECMC Table 915-1, and EC, SAR, pH, and boron. All samples collected were analyzed by a certified laboratory using approved ECMC laboratory analysis methods.

**Additional Investigative Actions**

Additional alternative investigative actions described in attached Site Investigation Plan ( summary ):

Visual inspection at the tank battery area occurred during abandonment activities. Field personnel field screened all disturbed areas using a PID, visual, and olfactory senses to determine if laboratory confirmation sampling was required. The ECMC Tank Battery and Produced Water Vessel Closure Checklists were utilized and filled out during the abandonment process. A photolog is attached.

**OPERATOR COMMENT**

The purpose of this form is to update the ECMC with data collected during the decommissioning of the VEGA USX A03-05 TANK. Confirmation soil sample analytical results were reported with no exceedances for Table 915-1 organic compounds or Soil Suitability for Reclamation standards. In the absence of any other evidence of a spill, it is suggested that elevated concentrations of metals, reported in the analysis of the Vega Tank Battery decommissioning confirmation soil samples, are naturally occurring. The Operator respectfully requests NFA for Remediation Project #: 33855.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
