INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Decommissioning activities at the Herman UP 41-31A,UP Facility were conducted on September 10, 2024. Groundwater was not encountered during excavation activities. Visual inspection and field screening of soils at one aboveground storage tanks (AST), one produced water vessel (PWV), one emission control device (ECD), one meter house, and one separator were conducted following removal activities and soil samples AST01@0.5', PWV-B01@4', PWV-N01@2', SEP01-INLET@3', and SEP01-OUTLET@3' were submitted for laboratory analysis of full list Table 915-1 constituents, to determine if a release occurred. Final laboratory analytical results for all samples are pending. The soil sample locations are depicted on Figure 1. The PID readings are summarized in Table 1.

Assessment activities are ongoing, and details will be provided in a subsequent Form 27 Supplemental report.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

On September 10, 2024, five (5) confirmation soil samples were collected from the former AST, PWV, and separator locations at depths ranging from 0.5 feet below ground surface (ft bgs) to 4 ft bgs. The soil samples were submitted for full list Table 915-1 constituents, using ECOMC-approved methods. Final laboratory analytical results for all samples are pending. The PID readings are summarized in Table 1.

Proposed Groundwater Sampling

Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Groundwater was not encountered during facility decommissioning activities.

Proposed Surface Water Sampling

Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Additional Investigative Actions

Additional alternative investigative actions described in attached Site Investigation Plan (summary):

On September 10, 2024, visual inspections and field screening of soil were conducted at the hatch and base of the AST, three sidewalls of the PWV excavation, one meter house, and one ECD. Based on the inspection and screening results, hydrocarbon-impacted soils were not observed at the soil screening locations. As a result, no soil samples were submitted for laboratory analysis from these areas in accordance with the ECOMC Operator Guidance. A photographic log is attached.
