**General Comment:**

ECMC Environmental Inspection of Snyder Oil's (Operator) CAMP 30-14J well (Loc 408839/API 123-17091).

On November 29, 2023, Kerr-McGee Oil & Gas Onshore LP (KMOG) performed a re-entry on the Camp 30-14J wellhead. Post re-entry, KMOG performed cut & cap procedures and the soil within the cut & cap excavation was screened and sampled. Laboratory results indicate soil impacts in exceedance of Table 915-1 standards are present in the excavation. KMOG notified ECMC of the historic release on November 12, 2024, and provided a decommissioning package containing sampling maps, results tables, field notes, GPS data and the associated lab report. The decommissioning package has been attached to this Field Inspection Report.

The CAMP 30-14J wellhead is classified as dry and abandoned and was plugged and abandoned on 7/8/1993 under Snyder Oil Corp.

During the inspection ECMC observed an open excavation surrounded by cattle fencing. Contract personnel were on location at the time of this field inspection. Crews indicated the cattle fencing would be removed and the excavation backfilled with the soil stockpiled on location. Soil stockpiled on location is from the excavation. Photos attached to document site conditions at the time of inspection.
