General Comment:

ECMC Environmental Inspection of Snyder Oil's (Operator) CAMP #30-6J well (Loc 408835 API 123-16983). There were no operator or contract environmental personnel on location at the time of this field inspection.

On November 29, 2023, Kerr-McGee Oil & Gas Onshore LP (KMOG) performed a re-entry on the Camp 30-6J wellhead. Post re-entry, KMOG performed cut & cap procedures and the soil within the cut & cap excavation was screened and sampled. After sampling, the extents of the excavation were GPS'd and the excavation was backfilled. Laboratory results indicate soil impacts in exceedance of Table 915-1 standards are present within the former excavation. KMOG notified ECMC of the historic release on October 10, 2024, and provided a decommissioning package containing sampling maps, results tables, field notes, GPS data and the associated lab report. The decommissioning package has been attached to this Field Inspection Report.

The CAMP 30-6J wellhead is classified as dry and abandoned and was plugged and abandoned on 5/13/1993 under Snyder Oil Corp.

During the field inspection on 12/11/2024, ECMC confirmed the excavation was backfilled. Photos attached to document site conditions at the time of inspection.
