## INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Pursuant to ECMC Rule 911 a site investigation was conducted pertaining to the RIES 3-19 wellhead cut and cap and flowline removal. The wellhead was cut and capped per ECMC rules. Approximately 2015' of flowline was removed; approximately 265' of flowline was abandoned-in-place due to field constraints. An initial Site investigation was completed by Eagle Environmental in November 2022 which included seven (7) grab soil samples collected at the wellhead excavation (1), flowline terminuses at the wellhead (1) and separator (1), flowline directional changes (2), and cut-points of flowline abandonment (2), and was reported under REM #24968 (Form 27 Document Number 403725902). Soil samples were analyzed by a certified laboratory for TPH (total volatile [C6-C10] and extractable [C10-C36] hydrocarbons), organic compounds in soil per ECMC Table 915-1, EC, SAR, pH, and boron. Analytical results found thirteen soil samples exceeded the ECMC Table 915-1 values for pH and SAR. These exceedances require further action to delineate and assess pH and SAR at this Site.

## PROPOSED SAMPLING PLAN

### Proposed Soil Sampling

Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Twenty-four (24) discreet interval grab samples were collected from eight hand-auger soil borings. Samples were collected at 4-, 6-, and 8-feet below ground surface (bgs) intervals to delineate around the wellhead and 1-, 3-, and 5-feet intervals to delineate around the flowline at each respective boring location (ie. three samples per boring). Four wellhead delineation soil borings (WH-01-N, WH-01-S, WH-01-E, and WH-01-W) within the former operations boundary of the Ries #3-19 wellhead to delineate the pH exceedance. Four delineation soil borings (FL-01-N, FL-01-S, FL-01-E, FL-01-W) were advanced around the Ries #3-19 flowline to delineate the SAR exceedance. Soil samples were analyzed by a certified laboratory for analysis of pH by United States Environmental Protection Agency (EPA) Method 9045D and analysis of SAR by EPA Method 6020B/USDA60 6(2).

### Proposed Groundwater Sampling

Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

### Proposed Surface Water Sampling

Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):
