General Comment:

On 12/31/2024, Western Reclamation Work Lead Trujillo conducted an interim reclamation and stormwater inspection at Anschutz Exploration Corp's BHR J22-397 Location in Rio Blanco County, Colorado.

Location is Fee Surface, with Fed Minerals.

This is also a follow-up inspection to #696205881, #696205993 and #696206335 to document compliance with the following corrective actions:

- Interim Reclamation of areas not needed for production
- Spill/Release
- Mechanical Condition
- Protection of topsoil / Weeds
- Anchor Marking requirements

It was observed in this inspection that the corrective actions related to reclamation, topsoil and anchor marking requirements have been resolved; corrective actions related to spills and mechanical integrity of equipment remains outstanding.

The following new compliance issues were observed during this inspection:

- Good Housekeeping

Refer to the "Location" and "Reclamation" sections of this inspection report for additional details.

Refer to the photo-documentation of the observed compliance issues attached to this report.

Any corrective action(s) from previous inspection that have not been addressed are still applicable.

Comment: 1-888-696-1300 / 911

Corrective Action:

Date: _____

Good Housekeeping:

Type

Comment: Unused equipment, or equipment not necessary for production (hose/tubing, boxed generator) observed stored around the compressor equipment.

Corrective Action: Comply with 606 Rules

Date: 01/14/2025

Overall Good: ☐**Spills:**

Type

Area

Volume

Comment: Previous inspections observed spills throughout the working pad surface of the Location. Inspections required Operator to comply with Rule 912.a and to clean spills/impacts to Table 915-1 cleanup concentrations.

It was observed in this inspection that spills have continued within the same areas of the Location identified in previous inspections. Operator has precariously placed buckets beneath equipment to capture the majority of the fluids leaking, however impacts to the pad surface have continued. This is not proper management of E&P waste and little effort would be required for the buckets to be knocked over. Fluids within containers will also require removal and proper disposal.

This CA will remain applicable.

Corrective Action: Clean up spills/releases per Rule 912.a. Clean/Remediate impacts to Table 915-1 standards.

Date:

Remove and properly dispose fluids leaking from equipment.

Due to the continued compliance issues, this is being considered for enforcement.

Comment: Previous inspection observed equipment/pipe throughout the Location with leaks, resulting in spills onto the surface of Location/Pad. Inspections required Operator to comply with Rule 608.e.

It was observed in this inspection that leaks remain apparent at pipe equipment on the northeast end of the Location, resulting in additional spills.

Work to address the compliance issues has not been performed, or has been insufficient.

Corrective Action: Securely fasten all valves, pipes, fittings, and Production Facilities to ensure good mechanical condition, inspect at regular intervals and maintain in good mechanical condition per Rule 608.e.

Date:

Due to the continued compliance issues, this is being considered for enforcement.

In Containment: No

Comment

Previous inspection observed that interim reclamation had not been performed in accordance with 1003 Rules; specifically compaction alleviation had not been conducted within areas on the south end of the Location, and the secondary access road. Inspections required Operator to comply with 1003 Rules.

It was observed in this inspection that additional reclamation efforts to address the corrective actions have been performed. This CA has been addressed. Reclamation of the Location is considered "in process".
