

CLAIM 4 SUPPORT
SELECT CHEMISTRY LLC
PFR-465

The information is not readily discoverable through reverse engineering.

The success of reverse engineering a product depends on various factors. Such factors include the capability of the analytical equipment, skill of personnel, and the complexity of the chemical interactions that comprise the product. If provided with the trade secret composition, a trained person skilled in the art of product development for these types of chemical technologies may be able to decipher which components are associated with the chemical complexes that enable the competitive performance of PFR-465.

For this reason, appropriate measures have been taken to protect the confidential identity of PFR-465 from public disclosure. Absent the knowledge of trade secret components, Select Chemistry LLC is confident that the proposed trade secret information is not readily discoverable through reverse engineering the finished product.
