COMMENTS:

This well started mitigation in December 2019. The pre-P&A bradenhead test conducted 10/15/2024 (Form 17 doc# 403959611) reported 247 psi and a total volume of 0.3874 MSCF, flown at an initial rate of 42.36 MCFD. This well was tied into the facility until P/A operations were conducted to effectively keep the bradenhead pressure below the action threshold. This can be seen in the pressure trends (charts attached). Crestone Peak noticed migration after setting plug above UPA, drilled out and put on blowdowns. Crestone Peak is in contact with area engineer to discuss pressures, blowdowns and path forward. Sample results from show the bradenhead gas is thermogenic in origin but not a match for production. Crestone Peak will submit a sundry following P&A operations and a successful cut and cap to close out the Bradenhead PMP.
