COMMENTS:

This well started mitigation in August 2023. The bradenhead test conducted 08/08/2023 (Form 17 doc# 403497761) reported 87 psi. In the previous 6 months of bradenhead drawdown mitigation, Extraction has seen progress with this well's pressure but believes that it would benefit from an additional round of drawdown through the fugitive gas destruction device set at the wellhead. Progress can be seen in the pressure trends (charts attached) and the bradenhead test conducted 01/22/2025 (Form 17 doc# 404067372) reporting 5 psi and a total volume of 0.0002 MSCF, flown at an initial rate of 7.01 MCF/D. Plots of Methane d13C vs dD, Methane d13C vs C1/(C2+C3), and Methane d13C vs Wetness Genetic classification plot indicate the bradenhead gas is mixed microbial/thermogenic. Extraction is confident in the efficacy of the current mitigation program and is requesting that this mitigation plan be extended for an additional 12 months.
