INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Pursuant to ECMC Rule 911 a site investigation was conducted pertaining to the FRANK C12-22 wellhead cut and cap. The wellhead was cut and capped per ECMC rules. Additionally, soil samples were field screened at the N-E-S-W sides of the wellhead. The flowline was previously abandoned on 10/4/2016, prior to the registration rules. Therefore, the line is unregistered and there is no corresponding ECMC Form 44 Document number.

Two (2) grab soil samples were collected (1) at the wellhead excavation and (1) background, and soil samples were field screened at the N-E-S-W sides of the wellhead. Wellhead soil sample was analyzed by a certified laboratory for the full extent of Table 915-1 and the background sample was analyzed for metals and SSR. All samples collected were analyzed by a certified laboratory using approved ECMC laboratory analysis methods.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Additional grab samples will be collected from near the excavation limits (North, East, South and West, and at the excavation base below 6' below ground surface) and analyzed for full SSR 915 to further delineate residual arsenic identified in sample WH-FS-01 @ 6', which was collected from the wellhead location.
