Operator Comments:

During frac Bison discovered a hole in the casing at 5849' and a vertical 1' split.

Bison proposes the below to repair the subject well :

1. Perform and clean/out, washout run on coiled tubing.
2. Run a 5-1/2" composite bridge plug on coiled tubing and set the plug above the current perforations.
3. Run a full string of 4" 11.6 lb/ft P-110 flush joint casing, tag composite bridge plug, pull up and space-out.
4. Cement 4" casing inside of the 5-1/2" casing, bringing cement all the way back to surface.
5. Run a cement bond log and confirm good cement bond.
6. Pressure test casing to 500 psi greater than max anticipated treating pressure.
7. Resume completions and frac operations inside the 4" casing.

I hereby certify all statements made in this form are, to the best of my knowledge, true, correct, and complete.
