**Proposed Soil Sampling**

Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Grab confirmation soil samples were collected from the produced water vessel(s) excavation, beneath the ground oil tank(s), and at the risers for the flowline(s) and dumpline(s) of any separator(s). Soil samples were analyzed by a certified laboratory for the full extent of Table 915-1, including but not limited to: TPH (total volatile [C6-C10] and extractable [C10-C36] hydrocarbons) organic compounds in soil per ECMC Table 915-1, and EC, SAR, pH, metals, and boron. All samples collected were analyzed by a certified laboratory using approved ECMC laboratory analysis methods.

Two background soil samples were collected near the tank battery and analyzed for metals in soil per ECMC Table 915-1, pH, SAR, EC, and boron. Background soil samples were collected from depths ranging between 0 to 3 feet below ground surface (ft bgs). The maximum background concentrations for pH was observed to be 8.20. The maximum background concentrations with a 1.25x multiplier applied for arsenic, cadmium, and lead was calculated to be 2.85 mg/kg, 0.200mg/kg, and 7.63mg/kg, respectively. All arsenic concentrations observed during decommissioning were below background levels.

Is further site investigation required?

A supplemental site investigation (SSI) will be completed to vertically and horizontally delineate the pH exceedances observed during decommissioning. A proposed SSI map is attached to this Form 27. During the SSI, soil samples will be collected and analyzed for full ECMC Table 915-1 constituents. Additional background samples will be collected to determine if pH, cadmium, and lead are attributed to native soil conditions at the site. The SSI will be completed in accordance with the proposed implementation schedule, and the results of the SSI will be submitted on a subsequent Form 27.

Two background soil samples were collected near the tank battery and analyzed for metals in soil per ECMC Table 915-1, pH, SAR, EC, and boron. Background soil samples were collected from depths ranging between 0 to 3 feet below ground surface (ft bgs). The maximum background concentrations for pH was observed to be 8.20. The maximum background concentrations with a 1.25x multiplier applied for arsenic, cadmium, and lead was calculated to be 2.85 mg/kg, 0.200mg/kg, and 7.63mg/kg, respectively. All arsenic concentrations observed during decommissioning were below background levels.

Quarterly reporting will be conducted until closure criteria are achieved for the remediation project. The results of the supplemental site investigation will be submitted on a subsequent Form 27.
