Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

At approximately 1:30pm on 2/14/2025 KPK was notified by a KWS roustabout crew that a line was struck during excavation, causing a spill. Crews were completing the abandonment of the Hladky O’Gorman 4 flowline when the underlying 4" steel Facility 9 Consolidation line was struck and a spill occurred. The line was immediately isolated, blown down, and KPK placed a jiffy clamp on the line. The spill flowed into a trench dug by KPK during P&A operations and has not flowed onto the surface. The volume of the spill is currently unknown. Crews have removed the liquids from the trench via vac truck and are scraping and removing contaminated soil. KPK has notified the landowner via email and has completed the Weld County OEM report form. The spill is approximately 500' west of a wetland. Approximately 63 yds³ of impacted soil have been disposed of at Buffalo Ridge landfill (see attached manifests). Additional soil is stockpiled in a lined, bermed area of the site.
